Services Lab Bench

PRODUCT BROCHURE

Back-to-Back Services Bench

Description

The Formaspace FLX is a highly versatile, component-welded, steel-framed lab bench that ships knocked-down for easier, cost-effective shipping. Designed for life sciences, laboratories, research facilities, and classrooms, FLX is engineered to optimize space and efficiency while offering flexibility in configuration and installation.

Each FLX bench can be set at different heights and easily reconfigured, making it a perfect solution for dynamic lab environments. A second user can be added with just a work surface and two legs, while back-to-back configurations require only a work surface and support frame. The customizable tops and frames, available in various colors and materials, allow the FLX bench to meet specific lab needs.

Built for efficiency, FLX features regency shelving for ample storage, integrated wire management troughs to hide electrical cords and services, and pre-cut knockouts in the raceway for gas, water, and other utilities. It assembles with just six bolts and is compatible with overhead service panels for streamlined service routing. FLX offers a modern, adaptable solution that reduces costs in freight and installation while maximizing functionality in any lab setting.

Product Highlights

- ▶ Ships KD for freight savings
- ▶ Easy services and wire management
 - ▶ Rear spreaders serve as services and wire management troughs
 - ▶ Pass through wire grommets incorporated
- ▶ Ease of routing service lines from above or below
 - ▶ Works perfectly with overhead service panels
